

ABSTRACT

The present invention relates to articles, such as a personal care product, having (i) a topsheet having a body-facing surface, said topsheet having a medicinal composition pattern applied to a region of the body-facing surface of the topsheet in an effective amount and wherein said pattern comprises individual segments having at least one dimension less than about 4 millimeters (extending in the MD and CD plane); and (ii) an absorbent material positioned adjacent the topsheet. In a further aspect, the article may further include a backsheet, which is desirably liquid-impervious, and which is positioned adjacent the absorbent material and opposite the topsheet. The present invention is also directed to a process for making said absorbent articles.
